

INDEX

This innovative index of the descendants of Richard Sears and their families was possible with the use of a computer database. The listing shows NAME, Sequence Number, Birth Date, Death Date, and Spouse's name or *Father's name if the spouse is unknown. I decided to use the sequence number instead of a page number because it enables one to find the information quicker. Unfortunately there is no provision to add people in the NEHGS numbering system (short of renumbering all 10,000 people) so I have used S.P. May's convention of adding a lower case letter for a new family and then following the letter with the roman numeral indicating the child's position in the family.
